

# Bonaire Optima

The Bonaire Optima combines the elegance of an all plastic cabinet with the strength and reliability of a commercial centrifugal fan and motor.

**BONAIRE**<sup>®</sup>

The leaders in heating and cooling

In some of Australia's more harsh environments, the expectations of an evaporative cooler can be far more demanding than would be necessary in some of our more temperate regions.

In these instances there is quite often a need for a more robust operating cooler. Whilst there has always been a cooler to accommodate this need, traditionally they have been manufactured for functionality with little regard for style and aesthetics.

The Bonaire Optima has changed that tradition.

The Bonaire Optima combines the elegance of an all plastic cabinet with the strength and reliability of a commercial centrifugal fan and motor.

**Features**

- Available in Slate Grey or Beige
- Powerful Variable speed motor
- Large CELdek pads for maximum cooling
- Simple easy to use control
- Designed and built for the harshest Australian environment
- Low running costs
- Australian manufactured and owned
