FOOD CABINETS

## Innovative merchandising

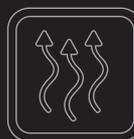

Experience in retail store development has seen FPG become a leader in food display cabinets. FPG designs and manufactures class leading cabinets for a wide range of industry applications from supermarkets and convenience stores, to cafes and bars.

## INLINE 4000 FOOD CABINETS

These cabinets offer a price competitive solution for the busy food service business wanting to display a large quantity or wide variety of food. Lighting and merchandising features are designed to create impact and increase sales. The Inline 4000 series is freestanding and available in a range of sizes and capacities. They come ready to "plug in" which means installation is quick and easy.

### self serve or serve over?

All FPG cabinets come with the option of either sliding front doors for customer "self serve" or solid glass fronts for staff "serve over". They are modular which means you can mix cabinet types making them truly versatile in being able to meet the specific needs of any food service business.

# INLINE 4000 FOOD CABINETS FEATURES

## Great looking food - great sales

Most people when buying food view from about 1 m back from the cabinet. FPG have designed their cabinet merchandising with this in mind. Individual shelf lighting units, shelf angles and glass shape are all designed to display product at its absolute best.

## Save money with energy efficiency

Low wattage density elements (heated), along with the latest refrigeration technology ensure optimum performance with low energy usage.

## Your food will stay fresh longer

Innovative refrigeration coil technology ensures better temperature control and cooling performance. This keeps humidity levels higher ensuring food does not dry out as quickly as it would in other cabinets.

## Inlines never sleep

Accurate temperature control along with defrost cycles ensure your cabinet can operate 24/7. If required, product can be held in the cabinet for longer and remain fresh.

### Built to save electricity

Double glazed glass provides a high thermal efficiency. A greater gap between glass panes enhances insulation and reduces energy costs.

### Unique ticket strips & shelves

Ticket strips run the front and rear of each shelf allowing simultaneous viewing by customer and staff.

### Easy to clean with removable parts

FPG's major components such as glass and shelves are smooth and can all be easily removed and cleaned. Removal of base trays allows access to the deck for easy cleaning.

### Adjustable feet

The stainless steel feet are adjustable for leveling and creates a 150mm clear area under cabinet.

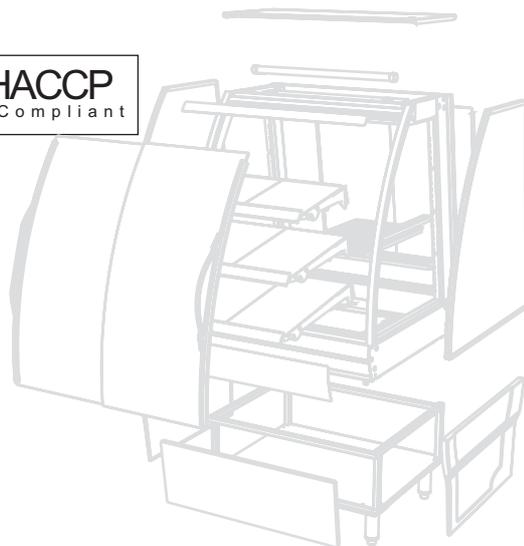

## Food safety and international standards

FPG cabinets are designed to exceed all current food safety requirements. Refrigerated cabinets will maintain food at a core temperature of 2-4 °C with up to 75 door openings per hour (customer serves). Moving air refrigeration technology ensures rapid temperature recovery if doors were left open.

Hot cabinets combine the technology of low wattage density elements and fast action thermostats to maintain a temperature of 65 °C - 100 °C. Both hot and cold cabinets can be incorporated into any HACCP plan.
