kitchen and refrigeration equipment

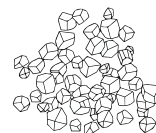

Flake ice is generated through a vertical cylinder, with an internal auger which scrapes the ice from the internal surface of the evaporator.

This system produces uniform **flake ice** with a residual water content

The flakers range comes in both self contained models and machines to be combined with a storage bin

The range reaches a maximum production of 1000 Kg per day

25%
FLAKE ICE
residual water content

15-18%
SUPERFLAKE ICE
residual water content

Flake ice has a lot of uses, from the conservation and display of fresh fish to cocktail creation and juice bars. **Flake ice** is also used in hospitals and during the production of sausages and bread, to chill the mix. **Flake ice** is extremely versatile.
