

WRK

0200/0700 heat pump

Heat pump, reversible gas side
Water/Water for indoor installation
Scroll compressor, plate exchanger
Cooling capacity 39 - 166 kW
Heating capacity 48 - 207 kW

HFC
 Refrigerant

R410A

Aermec participates in the EUROVENT Programme: LCP The products of interest can be found on the website www.eurovent-certification.com

- **COOLING / HEATING / PRODUCTION OF HIGH TEMPERATURE WATER ALSO FOR THE PRODUCTION OF DHW**
- **WATER PRODUCED UP TO 68°C**
- **OPTIMISED FOR HEATING IN CENTRALISED SYSTEMS**
- **INDEPENDENT FROM THE GAS NETWORK**

Characteristics

Indoor reversible water-cooled heat pump for air conditioning systems where, in addition to room cooling, **high temperature hot water is mainly required for heating and for domestic hot water. Particular attention has been given to winter operation, ensuring the production of hot water up to 68°C.**

All units are equipped with scroll compressors with steam injection and plate heat exchangers; the base and panelling are made of steel treated with polyester paints.

Immediately ready for installation, the heat pump can be supplied with all the components required for its installation in new systems and to replace other heat generators.

It can be combined with low temperature emission systems such as floor heating or fan coils, but also with conventional radiators.

Versions

WRK_H Standard

Construction features:

- Structure and base in hot galvanised sheet steel and with epoxy paint. (RAL 9002)
- High efficiency plate heat exchangers.
- Compressors featuring high performance and low electric absorption
- High and low pressure transducers as standard
- In compliance with Safety Directives (EC) and Standards regarding electromagnetic compatibility.

The safety of the appliance is guaranteed by the door-lock isolating switch on the electric control board and active protections on the main components.

- Command can be accessed from outdoors, with the user interface with display, showing all functioning parameters in several languages
- User-friendly remote control panel with alarm signals

Accessories

AER485P1

RS-485 interface for supervision systems with MODBUS protocol.

VT/AVX

Anti-vibration mounts.

AERNET

the device allows the control, the management and the remote monitoring of a Chiller with a PC, smartphone or tablet using Cloud connection. AERNET works as Master while every unit connected is configured as Slave (max. 6 unit); also,

with a simple click is possible to save a log file with all the connected unit datas in the personal terminal for post analysis.

PGD1

Simplified remote panel. Allows control of basic unit functions and alarm notification.

T6

double safety valve AP / BP with exchange valve

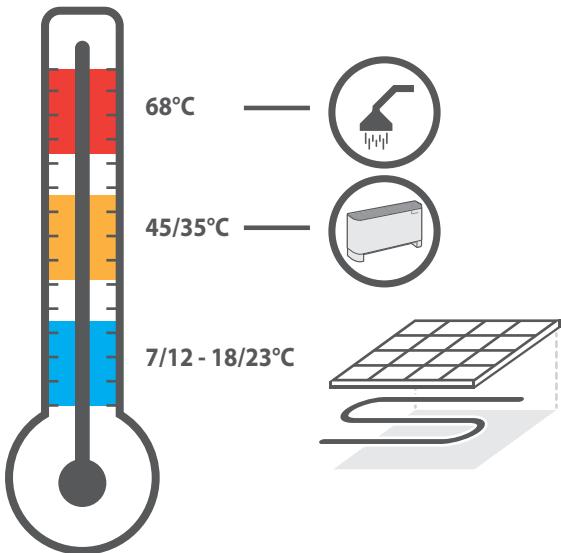

Accessories factory fitted only

DRE

Electronic soft starter which reduces starting current

RIF

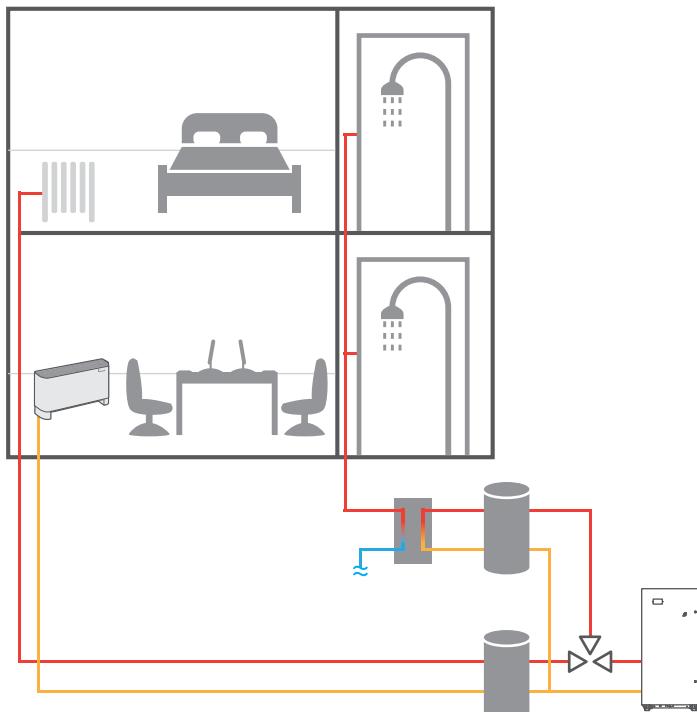

Power factor correction. Connected in parallel to the motor allowing about 10% reduction of input current.

WRK units are used in building renovations, where centralised boilers need replacing, while maintaining the existing distribution system and terminals (e.g. radiators) at the same time, to ensure the production of domestic hot water.

This situation is typical when operating in contexts such as public buildings, but also in the case of centralised residential systems such as condominiums, where costs must be limited without changing the distribution system, while also offering a renewable energy source, represented precisely by heat pumps.

Being able to upgrade a building without involving the distribution system also eliminates the inconveniences associated with the renovation of the premises, ensuring the continuity of the property's use, saving time and money

* for the compatibility of the anti-vibration devices of the units with hydronic kit, refer to the technical documentation.

Unit Configurator

By suitably combining the numerous options available it is possible to configure each model in such a way as to meet the most demanding of system requirements.
