RIGID WALL-TIES

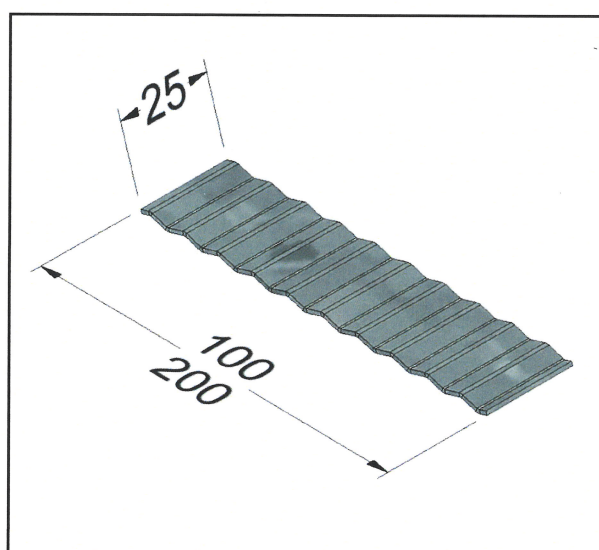

SKU: MFA 12

Three lengths of light duty face fix ties are manufactured suitable for brick-veneer construction and as jamb-ties. They are particularly convenient as brick-veneer ties when used in conjunction with reflective foil installation. The face-fixing method overcomes the need to puncture the foil during installation. The ties should be fixed with a 5mm fixing not less than 25mm in length.

Available in Galvanised Steel Z600 or Stainless Steel 1.0mm thickness
Lengths: 100mm, 150mm, 200mm

BRICK OR BLOCK

RIGID WALL-TIES

SKU: MFA GRIP-TIE

The Grip-ties make it possible to construct bonded walls (twin leaf solid walls) and piers without the use of header ties. The Grip-tie should be used at the rate of one tie per 0.2m² in bonded walls and one tie per course for all (engaged) piers.

Available in Galvanised Steel Z600 or Stainless Steel 1.0mm thickness
Lengths: 100mm, 200mm
